
The timing rung: cold-start fades to equilibrium — where it lands, and how long it takes
(a) Adoption over time at R=1.0
(all timing+acceptance priors swept)
Realised cultivated share (%)
Years
stabilises yr 17
(90% of final)
80% band
median
(b) Where it lands
= the long-run novelty attitude
Final (yr-30) share (%)
Long-run neophobia ν_x (where it lands)
(c) How long it takes
= the novelty-fade speed
Years to stabilise (90% of long-run share)
Fade rate (novelty fades faster →)
